

CEMENT PRODUCT INDUSTRY CO. LTD.

شركة منتجات صناعة الإسمنت المحدودة

## COMPANY PROFILE

Eng. Abdul-Aziz M. Sultan  
General Manager

In 1972, three major cement companies of Saudi Arabia formed CEMENT PRODUCT INDUSTRY CO. LTD. (CPI), with an objective to meet their requirements of paper sacks to pack cement. The first plant of CPI was at that time in the outskirts of the city of Jeddah.

Over the years, the company expanded its customer base and became a major supplier of multilayer paper sacks not only in Saudi Arabia but also in the neighboring countries.

Cement Product Industry Co. Ltd., is located in the Jeddah Industrial City Phase IV, south of Jeddah, Saudi Arabia.

Cement Product Industry Co. Ltd is equipped with new production facilities according to the latest technology in the field of manufacturing paper sacks.

These machines and installations allow the production of a wide range of paper sacks in all different dimensions for the industrial packing of any goods such as construction materials, chemical products, petrochemical products, fertilizers, food stuff, animal feed, flour, agricultural products and many other products.

The actual annual production capacity is 120 million sacks and can be extended at any time.

CPI enjoys a honourable reputation in the Middle East markets due to the high quality of its products, the reliability in deliveries and its effective after-sales services.

## OUR PRODUCTS

Cement Product Industry Co. Ltd. can provide to its clients a wide mix of glued valve sacks for industrial use.

This mix includes but is not limited to the following types of sacks:

- Sacks made of up to 4 plies of high quality paper for the filling of cement, building materials, auxiliary materials for the construction industry, food products, flour, cereals etc.
- Sacks made of up to 3 plies of paper with one layer of plastic film for the petrochemical industry, fertilizers, do-it-yourself products such as ready-mix, mortar etc.

- Sacks made of up to 3 layers of paper with one layer of laminate such as Paper/Plastic, Paper/Aluminum/Plastic for products sensitive to moisture or contamination such as food stuff, chemical products, animal feed, fertilizers etc.

Cement Product Industry Co. Ltd. can manufacture sacks of the following types;

- Glued valve sacks
- Open mouth sacks
- Glued valve sacks with hermetic valve
- Glued valve sacks with tubular valve

The above mentioned different types of sacks can be manufactured in any common used size ranging from:

Sack width: min. 18 cm max. 75 cm

Sack length: min. 25 cm max. 116 cm

Bottom width: min. 7 cm max. 18 cm

## HISTORY

**1972**

The plant was installed in the outskirts of Jeddah and was designed to produce the required cement sacks for the shareholders' companies. The production of Sacks in the old Plant amounted to 12 million sacks per year. This production was successively increased to reach 32 million sacks in 1987 and 35 million in 1999.

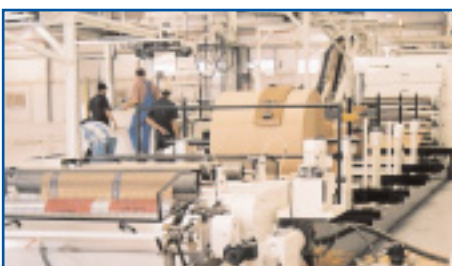

**April 2001**

In the year 2000 the management of CPI decided to install a new plant in the industrial zone in Jeddah with brand new machinery according to the latest technologies and with a higher capacity to satisfy the growing demand of the shareholders' factories for paper sacks and to enter new markets.

**November 2001**

The construction of the factory hall was well under progress and started to take its final shape with the administration tract on its side.

**December 2001**

The machines were received and installation started. A team of technicians from CPI were trained in machine supplier's shops in Germany and were effectively involved in the erection together with experts of the machine manufacturers.

#### May 2002

The installation of the first production line was completed ahead of schedule and the acceptance tests were successfully conducted. The production of this line started with full capacity at a rate of 98 000 sacks per shift of 8 hours. Thus, the overall production of the company in 2002 reached 47 million sacks.

#### July 2004

Due to the rapid increase of demand in the local as well as export markets, CPI decided to add a second brand new multipurpose production line to meet the requirements of its clients. This allows the production of a mix of sacks for wider range of usage other than the field of cement.

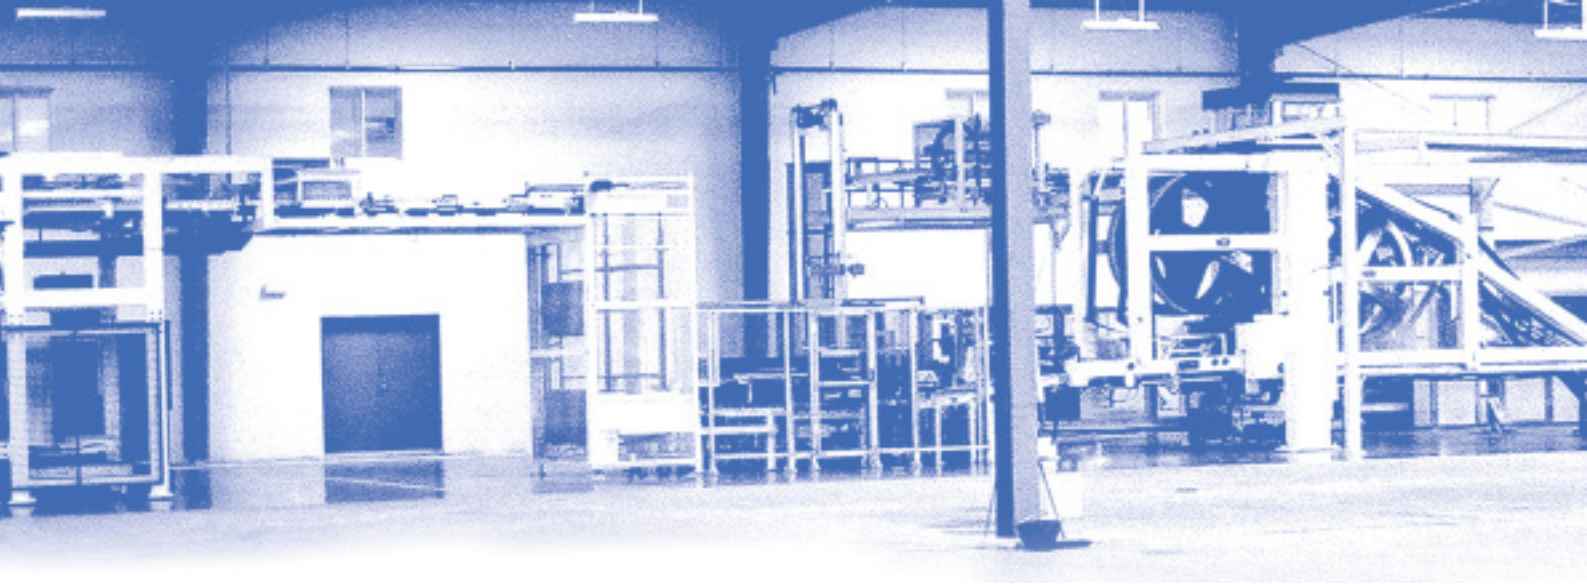

#### April 2005

With the start up of the second production line CPI became in a position to enter new markets such as small size bags for construction materials and aggregates as well as for chemical and petrochemical products. This line increased the nominal production capacity of the plant to 120 million sacks per year.

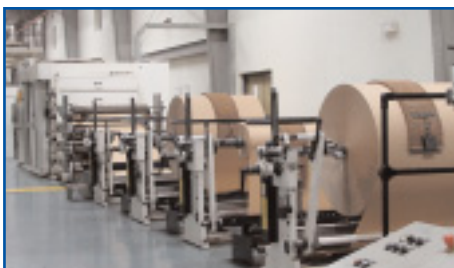

#### 2005

The good quality of its products, the reliability in deliveries and the after sales service contributed to the remarkable success of CPI. Now, CPI has become a major player in the paper sack industry, not only in Saudi Arabia but also in other countries of the Middle East.

## MACHINERY & QUALITY CONTROL

Tubing machine

Bottomer

Tensile strength testing machine

In its new plant in the Industrial zone phase 4 in Jeddah, Cement Product Industry Co. Ltd. installed the latest generation of paper sack production machinery. Cement Product Industry Co. Ltd. has now two production lines and can manufacture sacks of any type and for any industrial purpose.

Cement Product Industry Co. Ltd. can supply sacks of up to four plies and with four colour printing.

The high production speed of this equipment gives high flexibility regarding the delivery periods.

Cement Product Industry Co. Ltd. is now equipped with a day-to-day laboratory with the most modern testing equipment, thus allowing the testing of raw materials and finished sacks according to all applied international standards.

Every lot of raw materials received at the plant is tested to assure its conformity with the requested specifications.

The produced sacks are continuously tested at random according to the international standards and to the specifications set by the customer.

This continuous quality control gives our products a high reputation of quality all over our markets.

# PRODUCTION

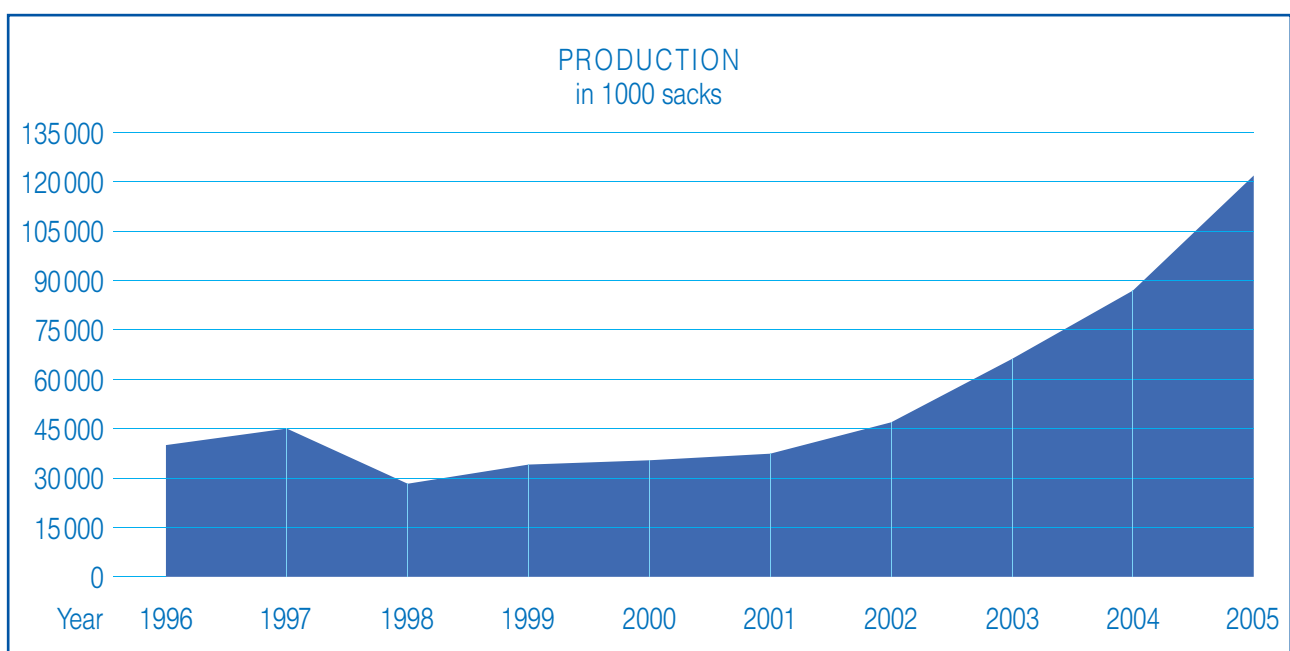

Cement Product Industry Co. Ltd. started production in 1972 with one production line having a capacity of 12 million sacks per year in one shift.

The production increased through three decades, and in the year 2000, reached 35 million sacks.

After the decision of developing CPI, the new management took decisive steps regarding the production machinery and the marketing activities.

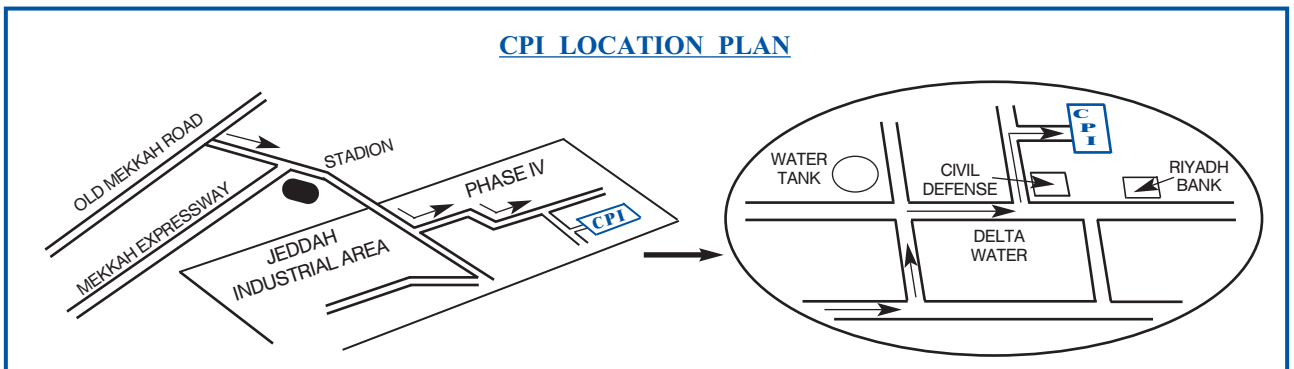

Soon (in the year 2001) the production volume was increased to 47 million sacks and in 2004 to 87 million sacks. CPI expects to increase its production in 2005 to 123 million sacks.

The graph below shows the rapid development of Cement Product Industry Co. Ltd.
